

PRESS RELEASE

Pontoise, November 10th, 2022

First integrated vertiport inaugurated in Paris, epicentre of sustainable Advanced Air Mobility (AAM) in Europe

- Groupe ADP and Skyports unveil the passenger terminal testbed for future electric vertical take-off and landing (eVTOL) at Pontoise-Cormeilles airfield, with the support of RATP Group, Paris-Région and the French Civil Aviation Authority (DGAG) depending on the French Ministry of Transports.
- The vertiport at Pontoise, one of a kind in Europe, brings together key technical components for future electric aircrafts including: take-off and landing areas, passenger terminal, maintenance hangar and control areas.
- The full passenger journey, as close as possible to the configuration expected in 2024, can now be tested: from accessing the terminal, to the control formalities based on biometrics technologies (developped by SITA), to boarding the aircraft.
- Volocopter has carried out a flight integrated into conventional air traffic.

First passenger terminal of a vertiport in Europe

Designed and developed by Skyports and Groupe ADP, **the new passenger terminal** will be used as a **testbed to prepare the experimentation planned for 2024** and the upcoming launch of passenger services, for:

- ◆ **passenger journey**: security and check-in processes, passenger dwell time, and aircraft boarding;
- ◆ **vehicle integration**, ground movement procedures, and charging operations;
- ◆ **flight scheduling** and passenger information.

This passenger terminal demonstrates first-hand Skyports safety and regulatory compliant, efficiency-led and functional approach to AAM infrastructure development. **At 115 sq.m**, the size of the vertiport terminal has been carefully considered to provide ample space to ensure a **comfortable passenger experience with fast throughput**, while taking up a small-as-possible footprint. The modular design allows for a fast and easy build, creates less construction waste, and provide in-built flexibility. This terminal was designed and constructed by local companies using, where possible, locally sourced materials.

The inauguration event, which marks the culmination of 12 months of testing campaigns at Pontoise airfield was completed with **live test flight by Volocopter integrated into conventional airspace**, in cohabitation with another aircraft, demonstrating the interaction between ground infrastructure and eVTOL aircraft.

Since its formation in 2020, the AAM Paris branch is formed of **30 industrial, academics or legal partners** to meet all the challenges: vehicle development, operations, infrastructure, airspace management, and public acceptance spaces. Regarding eVTOL companies (in addition to Volocopter, Airbus, Ascendance Flight Technologies, Lilium, Joby Aviation, Vertical Aerospace) **Eve Air Mobility**, dedicated subsidiary of Embraer, has recently joined the project.

2023 goal: develop uses and implement five additional vertiports by 2024

The Pontoise testbed will be instrumental **to ease new potential use cases**, including logistics, surveillance and maintenance monitoring, sanitary and medical.

In the **medical field**, ADP and RATP groups are working with the AP-HP (public assistance hospitals of Paris) to evaluate the conditions for a demonstration in a real environment as early as 2024, with the use of light aircraft to meet three transport needs: the transport of biological material, light injuries, or specialised doctors, from Paris-Le Bourget, a major health airport for the Paris region.

The skills developed at Pontoise will directly serve to settle several vertiports throughout the Paris region, in order to meet the **2024 deadline by offering two lines with passengers between:**

- ◆ **Paris and Versailles** (between Paris-Issy-les-Moulineaux heliport and Saint-Cyr l'École airfield) ;
- ◆ **Paris-Charles de Gaulle** and **Paris-Le Bourget** Airports, and a location in Paris at **Quai Austerlitz** (barge project on the Seine river bank).

Administrative procedures are underway for the establishment of these five vertiports.

For its part, Volocopter - whose 2X model is so far the only aircraft authorised by the DGAC for test flights at the Pontoise airfield - is in the process of obtaining European certification, which will enable it to fly at all the above-mentioned vertiports.

Thus, **by 2024**, the planned experimentation will be based on:

- ◆ **a fleet of about ten VoloCity** (Volocopter aircraft) ready for deployment;
- ◆ each aircraft will be able to perform **2-3 flights per hour**.

Flash-back on one year of successful test campaigns at Pontoise airfield:

more than 20 flights, 200km travelled and 1000 welcomed visitors

Successful tests have included:

1- Acoustic and vibratory impact modelling

- In March, RATP Group led an in-flight noise impact measurement campaign - in collaboration with Groupe ADP, Volocopter, Bruitparif, DGAC and ONERA - to understand and compare the noise levels of the Volocopter aircraft.
- The measurements were carried out for three flight conditions - overflight (50m and 25m altitude), hovering (7m and 25m altitude) and take-off/landing - using about ten microphones and three accelerometers. These measurements are also completed by meteorological measurements (wind gradient, speed, temperature, hygrometry). In total, **more than 25 sensors were deployed for this campaign**.
- The first results are in line with the levels announced by the manufacturer, with an emission level of 76 dB(A) measured on the Volocopter 2X prototype, which places **the mode below the emission level of a conventional bus**, and **four times less noisy than a helicopter**.
- In addition to the acoustic measures, an on-site poll conducted by ESSEC students during the tests showed that 86% of visitors did not expect such a perception of the sound impact, which they experienced as less noisy than imagined.

2- Airspace integration and deconfliction

- In September, under the European SESAR air traffic management innovation program, Volocopter (unmanned eVTOL flight), M3 Systems (drone designer) and Pipistrel (manufacturer of a 100% electric aircraft) conducted **a series of flight tests to simulate avoidance procedures**, with integration into an increasingly automated air traffic management (ATM) environment

Augustin de Romanet, Groupe ADP Chairman and CEO, said: "In Pontoise, we are taking a new decisive step in the development of electric air mobility. The passenger terminal marks the final stage in the development of the Pontoise testbed and the completion of a Volocopter flight fully integrated into the airfield's airspace is the epitome of a year of very ambitious test campaigns. We are now looking ahead to 2024: the development of all uses, sanitary and logistics."

Duncan Walker, CEO of Skyports, stated: "The Pontoise-Cormeilles terminal is a physical demonstration of the fact that innovation won't occur in isolation; it requires collaboration from a multitude of area experts, including operators, vehicle manufacturers, and technology developers, each of which have an important role to play in achieving the ultimate objective of commercial AAM services. With the completion of the terminal, we will now begin comprehensive testing of procedures and technologies in a realistic aviation environment, creating a space for Skyports and consortium partners to accelerate the industry."

Dirk Hoke, CEO of Volocopter, said: "Introducing a new kind of mobility like UAM can only be done successfully with a closely knit, yet open ecosystem. The testbed at Pontoise-Cormeilles is a stellar example of ecosystem partners collaborating to accelerate the realization of UAM. We can test processes, integrate new and old systems, and simulate different operational scenarios to create trust and positive awareness of all stakeholders. Together, we will succeed in providing an additional emission-free transport for the public. Every test is one step closer to commercialization in time for 2024."

Marie-Claude Dupuis, Strategy, Sustainable Development and Real Estate Director RATP Group, underlined : "This year of testing and validation has enabled us to make progress in evaluating the acceptability of these new vehicles and the urban insertion of vertiports. We are working together on the next steps to offer a new mobility experience by 2024."

And **Valérie Pecresse, President of the Paris Region**, to conclude: "The development of low-altitude aviation for urban air mobility is an adventure full of promises, for employment, for the environment and for the lives of Paris-Region residents. As the leading aeronautical region in France and Europe, Paris Region has all the resources to be a pioneer in this field and that is why we decided last year to support this exciting initiative financially. As the first plane ticket of the first airline company was taken in 1914 in Florida, I want the first passenger flight in a vertical take-off and landing aircraft to take place in our region, Paris Region. The Olympics are an incredible opportunity and showcase to launch this project and promote the site's experimental facilities. We will continue to support this project while remaining vigilant to ensure that the inhabitants of Paris Region benefit from it, in compliance with our decarbonization objectives detailed in the regional economic strategy Impact 2028."

About Groupe ADP

Press Contact: Justine Léger, Head of Medias and Reputation Department +33 1 74 25 23 23

Groupe ADP develops and manages airports, including Paris-Charles de Gaulle, Paris-Orly and Paris-Le Bourget. In 2021, the group handled through its brand Paris Aéroport more than 41.9 million passengers and 2.1 million metric tons of freight and mail at Paris-Charles de Gaulle and Paris-Orly, and more than 118.1 million passengers in airports abroad. Boasting an exceptional geographic location and a major catchment area, the Group is pursuing its strategy of adapting and modernizing its terminal facilities and upgrading quality of services; the group also intends to develop its retail and real estate businesses. In 2021, group revenue stood at €2,777 million and net income at -€248 million.

Registered office: 1, rue de France, 93 290 Tremblay-en-France. Aéroports de Paris is a public limited company (Société Anonyme) with share capital of €296,881,806. Registered in the Bobigny Trade and Company Register under no. 552 016 628.

About RATP Group

Press contact: Maria Mellouli, +33 (0)1 58 78 37 37 - maria.mellouli@ratp.fr / servicedepresse@ratp.fr

With 16 million trips daily worldwide, RATP Group is one of the largest urban transport operators in the world. Through its subsidiary RATP DEV, the Group operates in 13 countries on 4 continents, where it provides everyday mobility services across 8 transport modes: metro, urban and intercity buses, trams, rail, sightseeing services, cable cars, maritime shuttles, and transport on demand. The Group also has a strong presence in new forms of mobility, in partnership with other modes (free-floating electric scooters, car-sharing, carpooling and autonomous shuttles, smart car parks). The Group leverages its recognised expertise in infrastructure management and engineering to provide, via its subsidiaries, a wide range of urban services from engineering and managing real estate and retail areas, to delivering fibre networks, tailor-made passenger information and innovative ticketing solutions.

For over 70 years, RATP has operated one of the world's densest multimodal networks in Île-de-France. RATP Group's 69,000 employees worldwide design, implement and bring to life mobility solutions and innovative services to make the city more sustainable and more human.

About Paris Ile-de-France Region

Press contact: Eléonore Flacelière, +33 6 64 82 77 04 - eleonore.flaceliere@iledefrance.fr

Paris Region is a driving force for French employment and growth, both in terms of its economic weight and its influence. As the leading economic region in Europe and the third-largest urban economy in the world, behind Tokyo and New York, Paris Region is a hotbed for innovation due to its concentration of 40% of France's R&D activities. By and large, Paris Region benefits from a great international appeal.

Paris Region is active in most of the areas that affect the daily lives of its 12 million residents: transport, education, economic development, environment, etc. In an area that covers only 2% of France but is home to 18% of the country's population and nearly 30% of the national GDP, Paris Region is implementing a development policy which places the environment at the heart of its priorities. It is investing 10 billion euros towards it.

With 100,000 employees in its branch, Paris Region is a leader region of the aeronautical field in France and Europe. The decarbonization of this innovative sector responds in all aspects to the regional policy on attractiveness and economic development put in place by the regional economic strategy "Impact 2028".

About Skyports

Press contact: Maggie Mullan, PR and Communications Manager, +44 (0) 7577 744 037 - maggie.mullan@skyports.net

Skyports is the leading enabler of advanced air mobility (AAM), providing the critical link between the ground and the sky. The company designs, builds and operates take-off and landing infrastructure for air taxis, and partners with world-class electric vertical take-off and landing (eVTOL) passenger and cargo vehicle manufacturers around the world to enable safe, sustainable, and efficient flight operations within urban and suburban environments. Skyports also fly drones as a service, committed to creating positive change by connecting people, businesses and communities to vital supplies and services, such as healthcare, maritime, logistics and e-commerce.

Based in London, United Kingdom, Skyports has projects operating in multiple continents, including in Asia, Africa, Australia, Europe, Middle East and North America. Skyports investors include Deutsche Bahn Digital Ventures, Groupe ADP, Irelandia Aviation, Levitate Capital, Solar Ventus, The Goodman Group, Kanematsu Group, Ardan, F2i and Greenpoint.

About Volocopter GmbH

Press contact: Helena Treeck, +49 151 2372-1517 - helena.treeck@volocopter.com

Volocopter brings urban air mobility (UAM) to megacities worldwide. We aim to improve the quality of life for people in cities by offering a fantastic new mode of transportation. For that, we create sustainable and scalable UAM ecosystems with partners in infrastructure and operations.

Volocopter's family of eVTOL aircraft will offer passengers (VoloCity and VoloRegion) and goods (VoloDrone) swift, secure, and emission-free connections to their destinations, supported by VololQ, the UAM ecosystem's software platform that serves as its digital backbone for safe and efficient operations.

As a pioneer in the UAM industry, Volocopter will launch commercial services within the next few years. Founded in 2011, the company employs more than 500 people in Germany and Singapore, has completed over 1,500 successful public and private test flights, and has diverse investors, including Geely, NEOM, Mercedes-Benz Group, Intel Capital, and BlackRock.
